

Project: NBA Playoffs Interactive Map

Problem: I want to make a U.S. map that shows all the NBA teams that are in the 2021 NBA playoffs. Currently if you search in google all it does is shows the current and past games and if you go to standings all you will see is their conference position.

Solution: By providing an interactive map people will be able to click on a circle that will represent the city where the teams are located to see how the team did in the NBA playoffs. The circle will also show how far the teams made it in the playoffs with the biggest circle on the map representing the finalists. When clicking on the circle you are then shown a menu that shows all the games the team played in the playoffs and the scores of those games.
